Shipping damage and missing parts

Inspect the machine and parts carefully for possible damage that occurred during shipping. Contact the shipping company immediately if damage is found.

Order any missing parts (see the bill of material in these instructions).

1.2 Important safety information

This is the safety alert symbol. It means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED! It will direct your attention to information that concerns your safety.

Read and understand all safety information in the machine operator's manual before continuing with these instructions.

Most personal injuries are the result of failure to observe basic safety rules and precautions. In most cases, an injury can be avoided by recognizing hazardous situations before an injury occurs and taking appropriate action to remove or avoid the hazard.

The person installing this kit must have the necessary training, skills, and tools.

WARNING:

To avoid personal injury and/or machine damage, do the following before starting to install this kit:

- Use personal safety equipment appropriate to the task such as:
 - Protective eye wear
 - Gloves
 - Steel-toed shoes
 - Hearing protection
- Park the machine on a solid level surface.
- Disengage the PTO.
- Put the transmission in the parking position and apply the parking brake.
- Turn off the control console.
- Stop the engine and take the key with you.
- Look and Listen! Make sure all moving parts have stopped.
- Put blocks in front of and behind the machine wheels before working on or under the machine.
- Remove or relieve all sources of stored energy such as:
 - Disconnect the battery
 - Relieve hydraulic or fuel pressure

1.9 Adjusting the harrow depth

Before starting the procedure

The machine must be connected to a tractor that is the correct size for operation. See the information for the minimum tow vehicle weight.

The wheels of the machine must always be in contact with the ground during field operation to operate correctly.

Procedure

1. Find a solid, level surface large enough for the machine when unfolded.
2. Unfold the machine and fully raise the machine. Continue holding the hydraulic lever to let the oil cycle through the lift system.
3. Hold the lift cylinder hydraulic lever in the raised position for one to five minutes to make sure all cylinders are bled of air and fully extended.
4. Put the machine in the operating position.
5. Stop the tractor engine, apply the park brake, and take the key with you.
6. Remove the transport locks.
7. Move the depth adjustment bolt (1) on each section to one of the four positions (2).

Each section must be set to operate between 76 to 127 mm (3 to 5 in) when in the operating position.

Fig. 7

1.10 Leveling the harrow front to rear

Before starting the procedure

The machine must be connected to a tractor that is the correct size for operation. See the information for the minimum tow vehicle weight.

The wheels of the machine must always be in contact with the ground during field operation to operate correctly.

Procedure

1. Find a solid, level surface large enough for the machine when unfolded.
2. Unfold the machine and fully raise the machine. Continue holding the hydraulic lever to let the oil cycle through the lift system.
3. Hold the lift cylinder hydraulic lever in the raised position for one to five minutes to make sure all cylinders are bled of air and fully extended.
4. Stop the tractor engine, apply the park brake, and take the key with you.
5. Remove the transport locks.
6. Measure and record the harrow height at the front corners from the ground to the bottom of the frame tube.
7. Measure and record the harrow height at the rear corners from the ground to the of the frame tube.
8. Compare the front and rear measurements.
9. Remove the bolt (1) and other hardware from the arm/pivot bracket on each side of the machine.
10. Move each section to another of the four positions (2) until the section is level.
11. Install the bolts and other hardware and then tighten.
12. Adjust the basket pressure, as necessary by removing the bolts (3).
 - a) Move the casting to a more forward hole (4) to decrease the pressure.
 - b) Move the casting to a more rearward hole (5) to increase the pressure.
13. Install the bolts and tighten the hardware.

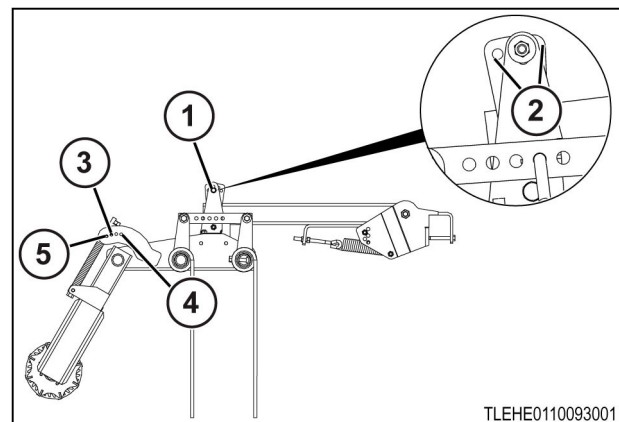

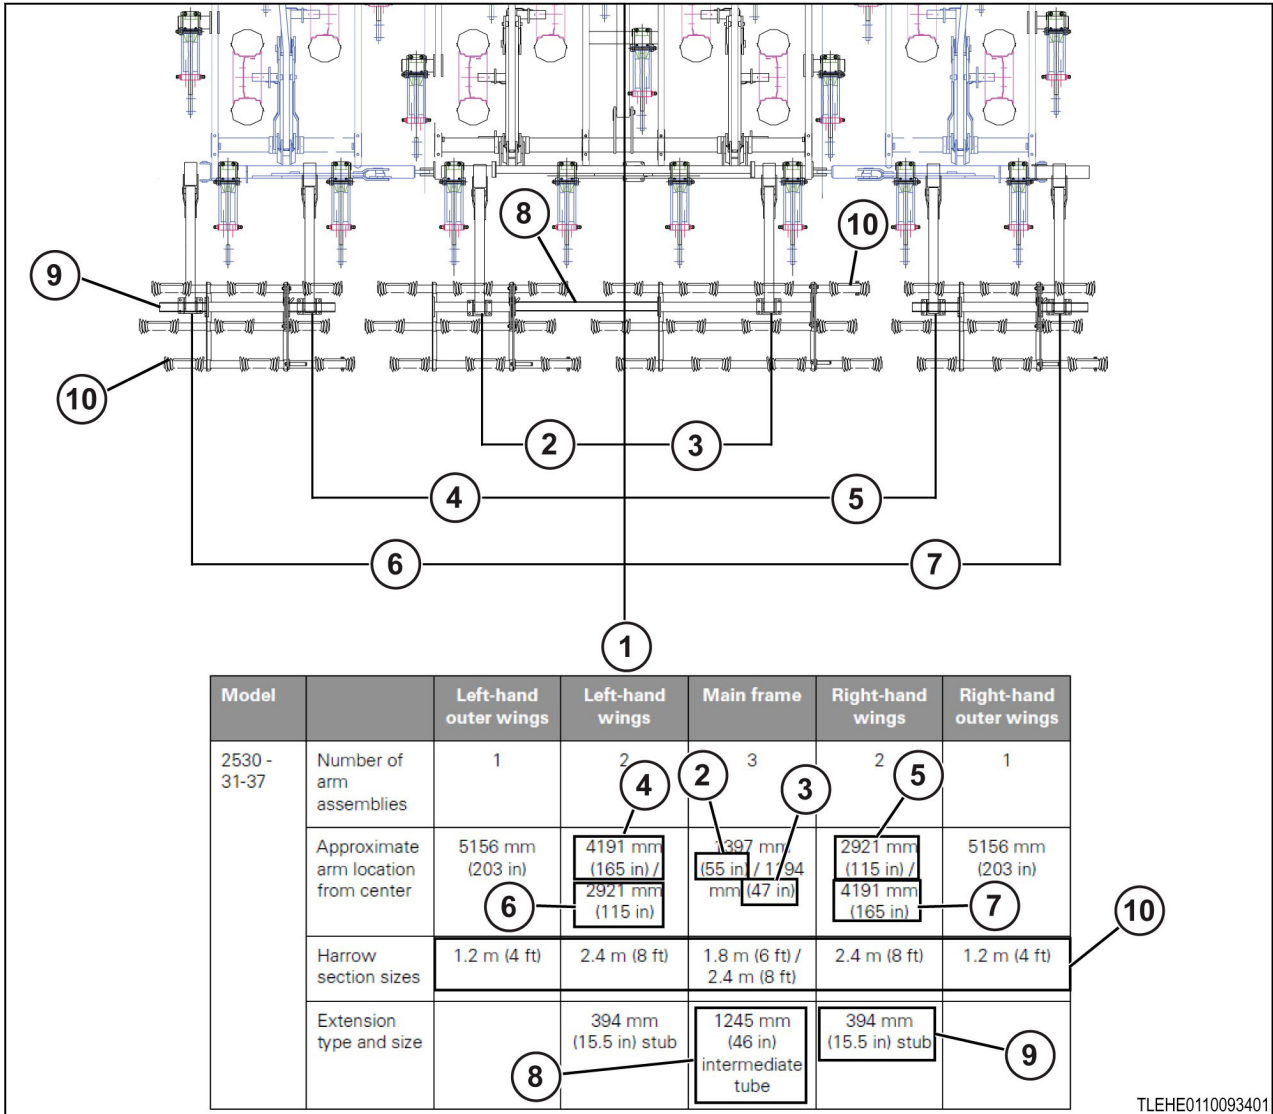

Fig. 8

NOTE:

Do not over tighten the bolts. The casting must be free to pivot.
