28	1	233528	13FT MAIN FRAME-5800 CP

Loosely mount the hitch mount brackets (8)&(10) to the frame tubes as shown. Position the rear hitch tubes (1) on top of the mount brackets and loosely attach with the hardware noted. Bolt the left and right winch mount brackets (7)&(11) under the hitch tubes, using the tie strap (3) to tie tubes together. Bolt the winch straps (2) under the hitch tubes and loosely secure the winch brackets. Measure a common point on the hitch tubes to common point on the frame corners and center the hitch on the frame. Slide the winch into position and once all major components have been positioned tighten all hardware.

Mount the hydraulic control valve strap (17) to the top of the right hitch tube, assemble the noted hydraulic fittings to the valve and mount the valve (19) on the strap. Run the hydraulic supply hoses from the tractor to the top ports of the valve along the frame members and rear hitch tube and secure with nylon ties. Connect the short supply hoses from the valve body to the winch ports.

HOSE 3/8X18 - VALVE TO WINCH

HOSE 3/8X276 - TO TRACTOR
